Curriculum specialist at CodePath — promoted twice in two years — building AI courses and maintaining the student-facing portal behind a 17-course catalogue.

EXPERIENCE

CodePath 2023–Present

Senior Curriculum Integration Specialist 2025–Present

- Developed and rolled out three new AI courses that teach students to build with AI, build AI tools themselves, and contribute to real open-source projects on GitHub.
- Maintain and improve the student-facing LMS portal — a combination of Markdown and frontend code using ERB, API dynamic tags, YML configuration, and custom CSS.
- Keep a 17-course catalogue current through frequent revision as the learner environment shifts rapidly, with AI at the forefront.

Curriculum Developer 2024–2025

- Maintained the Android course pathway, designing new curriculum and enhancing existing content; supported the Cybersecurity, iOS, and Technical Interview Prep pathways as needed.
- Managed project teams of subject-matter experts, content developers, and designers through active development cycles; between cycles, maintained LMS content and studied new software development technologies and pedagogical approaches.

Curriculum Writer 2023–2024

- Wrote and maintained project-based, industry-relevant curriculum for six courses: Web Development, iOS, Android, Cybersecurity, Technical Interview Prep, and Summer Internship for Tech Excellence (SITE).

Create & Learn — Teacher 2022–2023

- Tailored computer science lessons to K-12 students across a wide variety of topics, including Python and AI.

UC Berkeley EECS — Undergraduate Student Instructor 2019–2021

- Served as Lead Discussion TA for CS10, an introductory computer science course taught in Snap! and Python, earning a teacher rating of 4.75/5.
- Taught labs and discussions, contributed to course development, proctored and graded exams, held weekly office hours, and mentored academic interns.

PROJECTS

Prompt Yourself — free guide site on learning any topic with a free AI chat and writing your own AI interview-coach prompt; plain HTML/CSS/JS on GitHub Pages, with light/dark theming and progressive enhancement.

Déjà Vu Log — interactive visualization of a personal déjà vu log: 40 moments over three years, their stats, and the echoes between them; hand-built SVG visualizations, no chart libraries.

Stay-Fresh — iOS app, published to the App Store, that tracks food expiration to reduce food waste; users log the foods in their fridge and freezer. Built in Swift with Xcode.

SKILLS

Languages: Python, Java, Swift, Kotlin, C, Go, SQL, JavaScript, HTML/CSS

Web & Content: ERB, Markdown, YML, GraphQL

Tools & Platforms: Git/GitHub, Google Colab, Snap!

EDUCATION

University of California, Berkeley — B.A., Cognitive Science 2017–2021

VOLUNTEER TEACHING

SMASH Academy (2022) — neural-networks intro for incoming 12th graders, with hands-on coding in Google Colab ·

EastBay Collaborative for Underserved Children (2020) — 4th-grade lessons, projects, and concept review.
