EXPERIENCE

CodePath

2023–Present

Senior Curriculum Integration Specialist

2025–Present

- Took a new GenAI learning module from concept through launch — product requirements, stakeholder alignment, and curriculum design — delivered to all students.
- Ship continuous curriculum and platform improvements across a 17-course catalogue — course realignments, AI-grading validation, assessment fixes, and infrastructure migrations.
- Automate and streamline content delivery in the student-facing LMS portal — ERB templating, API dynamic tags, and YAML-driven configuration that cut manual, page-by-page editing.

Curriculum Developer

2024–2025

- Maintained the Android course pathway, designing new curriculum and enhancing existing content; supported the Cybersecurity, iOS, and Technical Interview Prep pathways as needed.
- Managed project teams of subject-matter experts, content developers, and designers through active development cycles; between cycles, maintained LMS content and studied new software development technologies and pedagogical approaches.

Curriculum Writer

2023–2024

- Wrote and maintained project-based, industry-relevant curriculum for six courses: Web Development, iOS, Android, Cybersecurity, Technical Interview Prep, and Summer Internship for Tech Excellence (SITE).

Create & Learn — Teacher

2022–2023

- Tailored computer science lessons to K-12 students across a wide variety of topics, including Python and AI.

UC Berkeley EECS — Undergraduate Student Instructor

2019–2021

- Served as Lead Discussion TA for CS10, an introductory computer science course taught in Snap! and Python, earning a teacher rating of 4.75/5.
- Taught labs and discussions, contributed to course development, proctored and graded exams, held weekly office hours, and mentored academic interns.

PROJECTS

Prompt Yourself — free guide site on learning any topic with a free AI chat and writing your own AI interview-coach prompt; guides built on retrieval practice, scaffolded explanations, teach-back, and spaced review.

Déjà Vu Log — interactive visualization of a personal déjà vu log: 40 moments over three years, their stats, and the echoes between them; SVG visualizations written from scratch in plain JavaScript.

Stay-Fresh — iOS app, published to the App Store, that tracks food expiration to reduce food waste; users log the foods in their fridge and freezer. Built in Swift with Xcode.

EDUCATION

University of California, Berkeley — B.A., Cognitive Science

2017–2021

SKILLS

Languages: Python, Java, Swift, Kotlin, C, Go, SQL, GraphQL, JavaScript, HTML/CSS

Content & Markup: ERB, Markdown, YAML

Tools & Platforms: Git/GitHub, Google Colab, Snap!

VOLUNTEER TEACHING

SMASH Academy (2022) — neural-networks intro for incoming 12th graders, with hands-on coding in Google Colab ·

EastBay Collaborative for Underserved Children (2020) — 4th-grade lessons, projects, and concept review.
